DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities:

- Page 4, lines 7 and 8, change "The sleeve has having a lock" to read, "The sleeve having a lock".
- Page 4, line 11, change "can be supplied" to read, "can be applied".

Appropriate correction is required.

Claim Objections

Claims 4 and 5 are objected to because of the following informalities:

- Claim 4, lines 1 and 2, change "comprising said detents are apertures" to read, "wherein said detents are apertures".
- Claim 5, lines 1 and 2, change "comprising said shanks having" to read, "wherein said shank having".

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3 and 4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 3 recites the limitations "the free edge, the center, and the edge" in lines 1-2, 3, and 4 respectively. There are insufficient antecedent bases for these limitations in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Arnold '798.

Arnold discloses a wrench for applying torque to bolts and nuts comprising a working end configured to closely contact the periphery of the head of a bolt or a nut, an elongated shank rigidly extending from the working end, a sleeve mounted on the elongated shank for circumferential rotation about the longitudinal axis of the shank, the sleeve having a lock to fix the sleeve at different circumferential positions about the shank, the sleeve having connector means for connecting an impact tool at different angles to the longitudinal axis of the shank whereby torque is supplied to the working end at varying angles to the longitudinal axis and circumferentially of the shank (Fig. 2).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3723

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arnold in view of Blessing '479.

Arnold is described above. Arnold does not specifically disclose a flange having a plurality of detents. Blessing discloses a flange having a plurality of detents with a rotatable leverage control handle connected thereto so as to apply torque from various angular positions to the workpiece. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have made the tool of Arnold to have a flange with a plurality of detents and with a rotatable leverage control handle connected thereto as taught by Blessing so as to apply torque from various angular positions to the workpiece.
